Education

Bachelor of Technology (B.Tech) in Information Technology

Bhagwan Parshuram Institute of Technology

Guru Gobind Singh Indraprastha University (GGSIPU), Delhi, India

Skills

Languages: Go, TypeScript, Rust, Java, Python, JavaScript, SQL

Frameworks & Tools: React, Next.js, Node.js, Express, REST APIs, TailwindCSS, Docker, Git, Linux

Databases & Cloud: PostgreSQL, MongoDB, MySQL, AWS (EC2, S3, ECS), Redis, Firebase, Supabase

Interests: Distributed Systems, Full-Stack Development, System Design, Scalable Systems, AI/LLM Tools

Experience

Full-Stack Developer (Freelance)

- Designed and shipped production full-stack applications for clients across SaaS and services — React frontends, Node.js/Express REST APIs, PostgreSQL on AWS.
- Built multi-tenant authentication systems (JWT + role-based access), third-party API integrations, and CI/CD pipelines via GitHub Actions.
- Delivered end-to-end ownership: requirements, architecture, implementation, cloud deployment, and post-launch iteration.

Marketing Intern — Monster Energy

- Worked on on-ground marketing campaigns and brand engagement initiatives.
- Assisted in event execution and market outreach strategies.

Projects

glos.io — UI-Context-Aware Localization Tool

TypeScript, Next.js, Zustand, Lingo.dev

- Designed a distributed localization pipeline: CLI orchestrates headless browser route capture, async Vision LLM context extraction, and downstream injection into the Lingo.dev translation API.
- Solved context-blindness in AI translation — the same string key now resolves to a different translation based on its UI location and element type.
- Shipped as a monorepo (CLI, Next.js dashboard, 16-locales demo app); published to npm with end-to-end async data flow across three decoupled packages.

WorkSea — Hiring Platform (SIH India)

TypeScript, React.js, Node.js, PostgreSQL, REST APIs

- Architected a distributed full-stack hiring platform with decoupled client, API, and database layers — built for Smart India Hackathon.
- Implemented JWT-based authentication, role-based access control, and horizontally scalable REST APIs backed by PostgreSQL.
- **Winner** at college-level SIH for problem-solving approach and UI quality; handled concurrent multi-role user flows under load.

FitLama — AI Fitness Coach

TypeScript, React.js, Tailwind CSS, Eternity UI, REST APIs

- Cloud-based AI fitness coach with a structured data ingestion layer — user metrics and goals are parsed, validated, and fed into a JSON-schema-constrained LLM prompt pipeline.
- Engineered consistent AI response formatting using schema-driven prompts, reducing hallucination rate in fitness advice significantly.
- Tested by **150+ users** across college demos and tech community showcases.

Resumate

TypeScript, React.js, Tailwind CSS, REST APIs

- AI-powered resume builder focused on ATS-friendly structure and content.
- Reduced resume creation time by **60%** using automated AI generation workflows.
- Designed for fast iteration, clean UX, and real-world job applications.

Achievements

- Active contributor to open-source repositories and community events.
- Participated in multiple college and university-level hackathons.
- Strong focus on product-based learning and shipping real-world projects.
